COMMISSION

COMMISSION DECISION

of 7 April 1978

establishing a Community typology for agricultural holdings

(78/463/EEC)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community,

Having regard to the Council Decision of 4 December 1962 on the coordination of policies on the structure of agriculture (1), and in particular Article 4 thereof,

Having regard to Council Regulation No 79/65/EEC of 15 June 1965 setting up a network for the collection of accountancy data on the incomes and business operation of agricultural holdings in the European Economic Community (2), as last amended by Regulation (EEC) No 2910/73 (3), and in particular Article 4 thereof,

Having regard to Council Regulation No 70/66/EEC of 14 June 1966 organizing a basic survey as part of a programme of surveys on the structure of agricultural holdings (4), as last amended by Regulation No 35/67/EEC (5), and in particular Article 12 thereof,

Having regard to Council Directive 75/108/EEC of 20 January 1975 on the organization of a structures survey for 1975 as part of the programme of surveys on the structure of agricultural holdings (6), and in particular Article 8 thereof,

Having regard to Council Regulation (EEC) No 3228/76 of 21 December 1976 on the organization of a survey on the structure of agricultural holdings for 1977 (7), and in particular Article 6 (1) thereof,

Having regard to Council Regulation (EEC) No 218/78 of 19 December 1977 on the organization of a survey on the structure of agricultural holdings for 1979/1980 (8), and in particular Article 7 thereof,

Whereas there are a large number of agricultural holdings in the Community of many different types and the analysis of their situation therefore necessitates the use of an appropriate Community typology;

Whereas this typology should be based on economic criteria concerning the two basic characteristics of the farm namely, its type of farming and its size;

(1) OJ No 136, 17. 12. 1962, p. 2892/62.
(2) OJ No 109, 23. 6. 1965, p. 1859/65.
(3) OJ No L 299, 27. 10. 1973, p. 1.
(4) OJ No 112, 24. 6. 1966, p. 2065/66.
(5) OJ No 33, 24. 2. 1967, p. 524/67.
(6) OJ No L 42, 15. 2. 1975, p. 21.
(7) OJ No L 366, 31. 12. 1976, p. 1.
(8) OJ No L 35, 4. 2. 1978, p. 1.

Whereas the gross margin concept is, in the present state of knowledge, the most suitable for the purpose and can be determined in a standardized form in each region for each farm enterprise;

Whereas the typology in question should be available so that it may be applied both to data from Community surveys on farm structure or statistical censuses and to data from the farm accountancy data network; whereas it should therefore constitute a common denominator enabling these two sources of information to complement each other;

Whereas this typology should allow the formation of groups of agricultural holdings to be combined or broken down variously according to the analytical requirements, while preserving the necessary coherence between the different levels of classification;

Whereas this typology should be capable of being modified where necessary, in particular in the light of experience and in response to changes in information needs;

Whereas the Standing Committee on Agricultural Structures has been consulted on the measures provided for in this Decision and the measures are in accordance with the opinion of the Community Committee for the Farm Accountancy Data Network of the EEC and the opinion of the Standing Committee for Agricultural Statistics,

HAS ADOPTED THIS DECISION

Article 1

For the purposes of this Decision:

(a) 'Community typology for agricultural holdings' (hereinafter called 'typology') shall mean a uniform classification of farms in the Community based on the type of farming and on the economic size of the holding, so arranged that homogeneous groups of holdings can be assembled in a greater or lesser degree of aggregation.

The type of farming and the economic size of the holding shall be determined on the basis of the standard gross margin.

(b) 'Type of farming' shall mean the system of production of a holding determined by the relative contribution of the different enterprises of the said holding to the total standard gross margin of the holding. Depending on the amount of detail required, the types of farming shall be divided into two categories: 'principal' and 'particular'.

(c) 'Economic size of the holding' shall mean the total standard gross margin of the holding; this shall correspond to the sum of the standard gross margins of each of the different enterprises of the holding and shall be expressed as a Community unit of measure.

(d) 'Standard gross margin' shall mean the balance between the standard value of production and the standard value of certain direct costs; this balance expressed for each region shall be determined and applied to each enterprise, either per hectare of agricultural area utilized in the case of crops or per animal in the case of livestock.

Article 2

1. The standard gross margins shall be as set out in Annex I.

2. The classes for the type of farming shall be as set out in Annex II.

3. The classes for the economic size of the holding shall be as set out in Annex III.

Article 3

1. The typology shall be designed to meet in particular the information needs of the common agricultural policy.

2. The typology shall be applied whenever due reference is made to this Decision; in each case the degree of aggregation and of detail required shall be specified.

3. The principal applications of the typology shall be in the collection and presentation of data by type of farming and size group, particularly in connection with Community statistical surveys and censuses and the EEC farm accountancy data network.

Article 4

Before 31 December 1980, the Commission, in cooperation with the Member States, shall undertake a full review of the typology taking particular account of experience acquired in applying this Decision and of any new Community needs.

Following this review, this Decision shall be amended as necessary.

Article 5

This Decision is addressed to the Member States.

Done at Brussels, 7 April 1978.

ANNEX I

STANDARD GROSS MARGINS FOR THE COMMUNITY TYPOLOGY OF AGRICULTURAL HOLDINGS

A. Standard gross margins

The standard gross margins (SGM) which are set out hereafter are expressed in European units of account (average value for 1972 to 1974 or 1972/73 to 1974/75 (1)). They relate to each heading, crop (hectares) or livestock (head (2)), of the list of characteristics of the 1975 farm structure survey (3).

The SGM are regionalized at the level of, in Germany 32 'Regierungsbezirke' (Hamburg, Bremen and Berlin constitute a single region), in France the 22 'régions de programme', in Italy the 52 survey districts (4), in the United Kingdom the six divisions of the farm accountancy data network (5), for Ireland and Denmark there are two regions; the SGM for Belgium, for the Netherlands and for Luxembourg are not regionalized.

---

(1) Conversion rate into national currencies: 1 EUA for 1972 to 1974 or 1972/73 to 1974/75 = DM 3·30936, FF 5·61631, Lit 714·426, Fl 3·40829, Lfrs/Bfrs 47·1022, £ (I) 0·486493, £ (E) 0·505836, Dkr 7·36069.

(2) For poultry: in hundreds of head.

(3) For France there are six additional values as follows:
(1) oil seeds and textile plants; (2) tobacco and hops; (3) other industrial plants; (4) quality wine; (5) table wine; (6) table grapes.

(4) Trentino-Alto Adige corresponds to two districts (Trento, Bolzano) whose SGM are identical.

(5) For certain headings there is a second SGM value suitable for use in handicapped areas (given in brackets).

B. Method of using standard gross margins

1. The SGM set out in A are used in the context of the Community typology for agricultural holdings to determine the type of farming and the size class appropriate to each holding considered.

2. The SGM which are applied to each holding are those for the region in which the holding is situated.

3. The SGM relating to crops are used to multiply the appropriate crop area expressed in hectares.

4. The application of the SGM for fodder crops (E/12: forage roots and tubers, E/18: forage plants, G/01: pasture and meadow) is as follows:

   (a) The SGM of fodder crops are normally zero, the variable costs of fodder being deducted when calculating the SGM of grazing livestock.

   (b) If there are no grazing livestock on the holding, fodder crops are treated in the same way as other crops. The appropriate SGM given under A is applied.

   This provision applies also in the case of Dutch holdings when the ratio between the SGM for fodder crops and the SGM for grazing livestock (K/01 to K/10) is higher than 2 and, in the case of French holdings, higher than 1.

   (c) For Danish holdings fodder crops are also taken into account when there is a surplus ([1]) or deficit ([2]) of fodder. In the case of Belgian holdings they are also taken into account, but only when there is a fodder surplus ([1]).

   (d) For these two countries, the existence of a fodder surplus, or of a fodder deficit in the case of Danish holdings, is determined as follows:

   The relationship between grazing livestock and fodder crops is established by weighting the numbers of livestock on each holding according to the weights set out in Table 1 below and the areas of fodder crops by the weights set out in Table 2 below.

   The resulting weighted grazing livestock figure is then divided by the weighted figure for the fodder crops; the ratio (R) derived from this calculation is then compared with a lower threshold ([3]) and, in the case of Danish holdings, with an upper threshold ([4]). If (R) is above the lower threshold and, for Denmark, below the upper threshold, the situation is considered 'normal' and fodder crops are not taken into account when calculating the Standard Gross Margin of the holding. If, on the other hand, (R) is below the lower threshold or, for Denmark, is above the upper threshold, there is a surplus or deficit of fodder and the following procedures are applied:

   — In the case of a surplus of fodder, only a part of the SGM for all fodder crops is taken into account. This part (x) is calculated according to the following formula: $x = \frac{a - R}{a}$

   where:

   a = 0·5 in Denmark and 2·5 (national average) in Belgium.

   The result is allocated to the different types of farming as indicated in Annex II (B) and added to the SGM for the other enterprises in order to determine the SGM of the holding.

   In this it is assumed that fodder crops have been used by the holding's livestock in the following order of priority:

   G/01 (pasture and meadow), E/18 (forage plants), and E/12 (forage roots and tubers).

([1]) Less than 0·5
([2]) More than 1·7 } see paragraph (d).
([3]) Lower threshold = 0·5.
([4]) Upper threshold = 1·7.

Example (Denmark): If (R) is 0·4, the part to be taken into account is:

$$\frac{0{\cdot}5 - 0{\cdot}4}{0{\cdot}5} = 1/5$$

If the SGM for fodder crops on the holding is: E/12 = 500, E/18 = 6 000, G/01 = 3 500 (total = 10 000), then 1/5 of 10 000, i.e. 2 000, is added to the SGM of the holding according to the following division: 500 for E/12 then the balance, i.e. 1 500 for E/18.

— In the case of Danish holdings with a fodder deficit the SGM for each category of grazing livestock on such holdings is reduced according to the following formula:

$$\frac{R - 1{\cdot}7}{R}(b - c),$$

where: b is the appropriate SGM given in A,

c is the appropriate SGM in Table 3 below.

Example: If for a Danish holding the ratio (R) is 3, the proportion to be taken into account is:

$$\frac{3 - 1{\cdot}7}{3} = 0{\cdot}43$$

For category K/07 (dairy cows), the normal SGM being 368 and the SGM from Table 3 being 238, the SGM to be applied in the case of this holding for this category of livestock is:

$$368 - 0{\cdot}43\ (368 - 238) = 312$$

5. The SGM relating to livestock are used to multiply the appropriate number of animals, expressed in terms of heads (for poultry (K/14, K/15, K/16) in terms of 100 head) (1). Piglets (K/11) are taken into account only when no breeding sows (K/12) are on the holding.

6. The SGM given in Table 3 below apply to grazing livestock on Danish and French holdings which do not produce fodder (E/12 + E/18 + G/01 = 0) (2).

7. When for a given holding the area of each crop on the one hand and the number of heads for each category of livestock on the other hand have been converted into SGM using the procedure set out above, two operations allow the holding to be classified, i.e.:

— the addition of the SGM for each enterprise in order to obtain the total SGM of the holding, this criterion being used to determine its size,

— the division of each of the SGM for the different principal and/or particular types by the total SGM of the holding in order to determine its type of farming.

(1) For certain livestock enterprises and for certain countries, the SGM vary according to whether they apply to the data from the structure survey or to data from the farm accountancy data network. In such cases, the SGM is shown with an asterisk; the value which applies to data from the structure survey is given in the tables of Annex I (A); the value which applies to data from the farm accountancy data network is given at the bottom of the tables.

(2) This provision applies also to French holdings where the ratio between the SGM for fodder and the SGM for grazing livestock (K/01 to K/10) is below 0·1.

B. DEFINITION OF TYPES

The types of farming are defined by two features:

(a) the composition of the headings concerned; these headings relate to the list of characteristics surveyed in the 1975 structure survey; they are indicated by using the codes in the Annex to Directive 75/108/EEC [1] [2];

(b) the thresholds determine the class limits; unless otherwise indicated, these thresholds are expressed as fractions of the total SGM of the holding (1/10, 1/4, 1/3, 2/3).

Holdings are considered to belong to:

— a 'bipolar' category where the activities corresponding to each of two types, of two groupings of types or of a type and a grouping of types contribute between one and two thirds of the total SGM of the holding,

— a 'partially dominant' category where the activities corresponding to one of the following poles — field crops, horticulture, permanent crops, grazing livestock, or pigs and poultry — account for between one and two thirds of the total SGM of the holding, the other such poles accounting for at most one third.

[1] A correspondence table between these headings and the headings of the FADN farm return is given in Annex II (C). When holdings are classified using the characteristics of the Community farm structure surveys of 1966, 1970, 1977 or 1979/80, the headings of the appropriate questionnaires are used after being matched to those of the 1975 structure survey.

[2] The characteristics E/12, E/18, G/01 and K/11 are used only under certain conditions (see Annex I (B)).

ANNEX III

CLASSIFICATION OF AGRICULTURAL HOLDINGS BY SIZE

1. The agricultural holding's size is expressed in terms of European size units (ESU).

   One ESU corresponds to 1 000 EUA (average value 1972 to 1974) of standard gross margin.

2. The holdings are classified by the following size classes:

	less than 2 ESU
from 2	to less than 4 ESU
from 4	to less than 8 ESU
from 8	to less than 16 ESU
from 16	to less than 40 ESU
equal to or greater than 40 ESU
