COMMISSION DECISION

of 18 April 2000

approving tests for the detection of antibodies against bovine brucellosis within the framework of Council Directive 64/432/EEC

(notified under document number C(2000) 1042)

(Text with EEA relevance)

(2000/330/EC)

THE COMMISSION OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Community,

Having regard to Council Directive 64/432/EEC of 26 June 1964 on health problems affecting intra-Community trade in bovine animals and swine [1], as last amended by Directive 98/99/EC [2], and in particular Article 6(2)(b) thereof,

Whereas:

(1) Bovine animals intended for intra-Community trade must, with regard to bovine brucellosis, come from a holding officially free of bovine brucellosis and, in addition, be tested within 30 days of dispatch by use of either a serum-agglutination test or any other test approved by Standing Veterinary Committee procedure following the adoption of the relevant protocols.

(2) In accordance with Article 16 of Directive 64/432/EEC, the Commission, in acordance with the procedures of Article 17 and on the basis of the opinion of the Scientific Veterinary Committee, shall update and if necessary amend Annexes B, C and D (Chapter II) to adapt them to scientific developments.

(3) The Commission has now received the final report of the Scientific Committee on Animal Health and Animal Welfare on the modification of the technical annexes to Directive 64/432/EEC to take account of scientific developments regarding tuberculosis, brucellosis and enzootic bovine leucosis [3].

(4) In this report the Scientific Committee recommended the preferential use of ELISA tests, the complement fixation test and the buffered brucella antigen tests for the detection of antibodies against bovine brucellosis, carried out *inter alia* on samples of blood taken from individual bovine animals. The recommended procedures are in line with the internationally recognised standards set out by the OIE (Manual of standards, Edition 1996, Chapter 3.2.1).

(5) It appears appropriate to recognise for certification purposes the brucellosis test results produced by use of ELISA tests, the complement fixation test and the buffered brucella antigen tests, if the tests were carried out in accordance with the approved protocols on samples of blood taken from individually identified bovine animals within the 30 days prior to certification of the tested animals for intra-Community trade.

(6) Therefore, pending the update of the technical Annexes B, C and D (Chapter II) in accordance with Article 16 of Directive 64/432/EEC, the ELISA tests, as specified in the report of the Scientific Committee and the complement fixation test and the buffered brucella antigen tests as specified in Annex C to that Directive shall be approved for brucellosis testing for certification purposes as provided for in Article 6(2)(b) and the animal health certificate in Annex F, model 1.

(7) The measures provided for in this Decision are in accordance with the opinion of the Standing veterinary Committee,

HAS ADOPTED THIS DECISION:

▼M1

Article 1

The complement fixation test, the buffered brucella antigen tests and the ELISA tests carried out in accordance with the provisions in Annex C to Directive 64/432/EEC are hereby approved for certification purposes.

▼B

Article 2

Where, for the purposes referred to in Article 6(2)(b) of Directive 64/432/EEC a test referred to in Article 1 of this Decision is used, the test must be specified in the column 'Test' of the tables in point 3, second indent, and in point 5 of Section A in Annex F, Model 1 (health certificate) to Directive 64/432/EEC.

Article 3

This Decision is addressed to the Member States.
