CORRIGENDA

Corrigendum to Council Directive 86/587/EEC of 18 November 1986 amending Annex I to Directive 64/433/EEC on health problems affecting intra-Community trade in fresh meat

(Official Journal of the European Communities No L 339, 2. 12. 1986)

On page 27, in Article (4), the first two lines are replaced by the following:

'(4) in Chapter VII,

(i) point 39 (a), (b) and (c), the introductory words are replaced by the following:

"(a) visual inspection of the slaughtered animal and the organs belonging to it;

(b) palpation of the organs referred to in point 40 and, if the official veterinarian deems it to be necessary, of the uterus;

(c) incision of certain organs and lymph nodes and, depending on the conclusions reached by the official veterinarian, the uterus (remainder unchanged) ...".

(ii) point 40 is replaced by the following:'.

On page 27, in Article 1 (4), new point 40, under A:

— (k) reads as follows:

'(k) visual inspection and, if necessary, palpation and incision of the udder and its lymph nodes *(lnn. supramammarii)*. In cows, each half of the udder must be opened by a long, deep incision as far as the lactiferous sinuses *(sinus galactophores)* and the lymph nodes of the udder must be incised, except when the udder is excluded from human consumption.'

— the last subparagraph of the text of A is deleted.

On page 28, in Article 1 (4), new point 40, under C, (b) reads as follows:

'(b) visual inspection of the lungs, trachea and oesophagus; palpation of the lungs and of the bronchial and mediastinal lymph nodes (*lnn. bifurcationes, eparteriales* and *mediastinales*). The trachea and the main branches of the bronchi must be opened lengthwise and the lungs must be incised in their posterior third, perpendicular to their main axes; however, these incisions are not necessary where the lungs are excluded from human consumption;'.

On page 29, in Article 1 (4), new point 40:

Point 40 is supplemented as follows:

'G. Where incision of the above lymph nodes is obligatory, they must be systematically subjected to multiple incisions and a visual inspection.'
