of 6 July 1987

Whereas the characteristic feature of double zero rape seed is the lower glucosinolate content, which facilitates its incorporation in feedingstuffs; whereas the first subparagraph of Article 2 (4) of Commission Regulation (EEC) No 2681/83 laying down detailed rules for the application of the subsidy system for oil seeds (3), as last amended by Regulation (EEC) No 532/87 (4), lays down a maximum authorized content of 20 micromoles per gram of seed of that description; whereas, however, the second subparagraph of that paragraph provides for a temporary derogation until the end of the 1987/88 marketing year to enable operators to adjust to the new quality requirements; whereas experience has shown that a further marketing year would be necessary for such an adjustment; whereas the maximum permissible glucosinolate content of double zero rape seed of 35 micromoles per gram of seed should consequnetly be extended until the end of the 1988/89 marketing year;
