either as one long field or to spread the data over up to eight  elements or
even to use both formats. If the user chooses the option to enter the data
required in separate elements, the container element for this will be
'AddressFix'. If the user chooses the option to enter the data required in a
less structured way in 'AddressFree' all available address details shall be
presented as one string of bytes, blank or "/" (slash) or carriage return- line
feed used as a delimiter between parts of the address. PLEASE NOTE that the
address country code is outside  both of these elements. The use of the fixed
form is recommended as a rule to allow easy matching. However, the use of the
free form is recommended if the sending state cannot reliably identify and
distinguish the different parts of the address. The user may want to use both
formats e.g. if besides separating the logical parts of the address he also
wants to indicate a suitable breakdown into print-lines by delimiters in the
free text form. In this case 'AddressFix' has to precede 'AddressFree'.
