The requisite information shall be drawn up as set out in the tables of Annex I to this Regulation in the form of data elements, expressed in the same manner as in the mutual administrative assistance document. All data

▼B

elements and data groups and subgroups to which those data elements belong shall be identified by numbers and letters referred to in columns A and B of the corresponding tables of Annex I.

The fall-back mutual administrative assistance document shall be exchanged by any means agreed between the competent authorities concerned.

ANNEX I

STRUCTURE OF COMMON MESSAGES

Electronic messages used for the purpose of information exchange concerning excise goods under duty suspension

EXPLANATORY NOTES

(1) The data elements of the electronic messages used for the purpose of information exchange concerning excise goods under duty suspension using the computerised system referred to in Article 21(2) of Directive 2008/118/EC and in Article 2(17) of Regulation (EU) No 389/2012 are structured in data groups and, where applicable, data subgroups. Details regarding the data and their use are presented in the tables of this Annex, in which:

(a) column A sets out the numeric code (number) attributed to each data group and data subgroup; each subgroup follows the sequence number of the data (sub)group of which it forms part (for example: where the data group number is 1, one data subgroup of that group is 1.1 and one data subgroup of that subgroup is 1.1.1);

(b) column B sets out the alphabetic code (letter) attributed to each data element in a data (sub)group;

(c) column C identifies the data (sub)group or data element;

(d) column D indicates for each data (sub)group or data element a value indicating whether the insertion of the corresponding data is:

— ‘R’ (required), meaning that the data must be provided; when a data (sub)group is ‘O’ (optional) or ‘C’ (conditional), data elements within that group can still be ‘R’ (required) when the competent authorities of the Member State have decided that the data in that (sub)group must be completed or when the condition for the enclosing data (sub)group is fulfilled,

— ‘O’ (optional), meaning that the insertion of the data is optional for the person submitting the message (the consignor or consignee) except where a Member State has stipulated that the data are required in accordance with the option provided for in column E for some of the optional data (sub)groups or data elements,

— ‘C’ (conditional), meaning that the use of the data (sub)group or data element depends on other data (sub)groups or data elements in the same message;

(e) column E sets out the condition(s) on which the insertion of data is conditional, specifies the use of the optional data where applicable and indicates which data must be provided by the competent authorities;

(f) column F provides explanations, where necessary, concerning the completion of the message;

(g) column G indicates:

▼B

— for some data (sub)groups a number followed by the character ‘x’ indicating how many times the data (sub)group can be repeated in the message (default = 1),

— for each data element, except for data elements indicating the time or date, the characteristics identifying the data type and the data length; the codes for the data types are as follows:

a alphabetic,

n numeric,

an alphanumeric.

The number following the code indicates the admissible data length for the data element concerned. The two dots before the length indicator mean that the data have no fixed length, but can have up to a number of digits, as specified by the length indicator. A comma in the data length means that the data can hold decimals, the number before the comma indicating the total length of the attribute, and the number after the comma indicating the maximum number of digits after the decimal point.

For data elements indicating the time or date, the mention ‘date’, ‘time’ or ‘dateTime’ means that the date, the time or the date and time must be given using the ISO 8601 standard for representation of dates and time.

(2) The following abbreviations are used in the tables of this Annex:

— e-AD: electronic administrative document,

— ARC: administrative reference code,

— SEED: system for exchange of excise data (the electronic database referred to in Article 19(1) of Regulation (EU) No 389/2012),

— CN Code: Combined Nomenclature code,

— MRN: movement reference Number,

— LRN: local reference number,

— LNG: language,

— VAT: value added tax,

— ACO: administrative cooperation.

ANNEX II

Lists of codes

Code list 1: Follow-up correlation ID

Field	Content	Field type	Examples
1	Year	Numeric 2	5
2	Identifier of the MS where the message was initially submitted	Alphabetic 2	ES
3	Free nationally assigned, code	Alphanumeric 21	ARC
4	Complement	Alphanumeric 3	123

Field 1 is last two digits of year.

Field 2 is taken from the list of <MEMBER STATES> *(see Code list 3 in Annex II to Regulation (EC) No 684/2009)*.

Field 3 must be filled with a nationally assigned identifier. In certain cases, for the Follow-Up Correlation ID it can be an ARC.

Field 4 gives a complement to field 3 to make together a unique identifier (for example, in the case of Follow-Up Correlation ID where several follow-up messages deal with the same ARC.)

▼M1

Code list 2: Event Report Number/Control Report Reference

Field	Content	Field type	Examples
1	Identifier of the MS where the report is validated	Alphabetic 2	ES
2	Nationally assigned, unique code	Alphanumeric 13	2005YTE17UIC2
3	Check Digit	Numeric 1	9

Field 1 is taken from the list of <MEMBER STATES> (*see Code list 3 in Annex II to Regulation (EC) No 684/2009*)

Field 2 must be filled with a unique identifier per report. The way this field is used is under MSAs' responsibility, but each report must have a unique number. It is possible, but not mandatory, that it contains the year when the report was initially submitted (as suggested in the example).

Field 3 gives the Check Digit for the whole identifier, which will help detect an error when keying this identifier.
