Institutions are requested to document their calculations and provide the documents to their competent authority upon request. 1. Information shall be submitted only for those counterparties where an actual exposure or a rating which is valid to be used in the calculation risk-weighted assets ('RWA') exists.

2. Information shall be submitted only for those exposures and portfolios where an internal model has been approved.

3. Information not required or not applicable shall not be submitted. Zero values shall be reported where the quantity is known to be zero.

4. For portfolios that are defined with a specific rating grade in Annex I, information on the probability of default ('PD') shall be reported for the entire rating scale used by the institution, even where no internal-ratings based ('IRB') exposure exists for the respective portfolio at the reporting reference date for each rating grade. In this case, the exposure at default ('EAD') shall be reported as zero and information on the other columns shall not be submitted.

5. Portfolios that are not defined by specific rating grade in Annex I shall not be submitted where no IRB exposure or valid rating exists at the reporting reference date.

6. Monetary amounts shall be reported as used for calculating own funds requirements as of a specific reference date (i.e. same as reported for Implementing Regulation (EU) No 680/2014).

230	RWA*		Institutions shall calculate and report RWA* for the portfolios Corporate, Corporate SME, Retail SME and Retail secured by real estate at a total portfolio and a country level. These portfolios are defined in template 103 of Annex I and are identified with the following portfolio ID: CORP_ALL_0086_**_****_**_Rx0 SMEC_ALL_0106_**_****_**_Rx0 SMER_ALL_0106_**_****_**_Rx0 MORT_ALL_0094_**_****_**_Rx0 RWA* is the hypothetical risk-weighted exposure amount, after applying the SME supporting factor, that results from the application of the PD* values, as defined below, instead of the institution's PD values, for each exposure. The remaining parameters (LGD, M,…) needed in the computation shall not be subject to changes. PD* is based on a calculation performed separately for each obligor grade, where the obligor grades as reported in column 005 of template 8.2 to Annex I to Implementing Regulation (EU) No 680/2014 (cf. Q&A 2016_2782) are to be used (see Annex II to Implementing Regulation (EU) No 680/2014, template 8.1 column 010 and template 8.2 for instructions). For each obligor grade, p* is the smallest positive value satisfying the equation $$p^* + \Phi^{-1}(q) \cdot \sqrt{\frac{p^* \cdot (1 - p^*)}{n}} \geq DR_{1y}$$ where: Φ^{-1} = the inverse function of the standard normal (cumulative) distribution; q = the confidence level set at 97,5 %;

Column	Label	Legal reference	Instructions
			DR_{1y} = the case weighted default rate of the year preceding the reference date, i.e., the number of obligors that were not in default and assigned the obligor grade under consideration exactly one year before the reference date and that defaulted during the latest year, divided by the number of obligors that were not in default and assigned the obligor grade under consideration exactly one year before the reference date; n = the number of obligors that were not in default and assigned the obligor grade under consideration exactly one year before the references date. For each obligor, PD* is defined as PD* = max(PD, p*), where PD is the PD assigned to the obligor for the purposes of the institution's RWA calculation and is as defined for the obligor grade assigned to the obligor. An institution using continuous PD shall first determine the PD* for the average PD of each obligor grade and subsequently apply by obligor grade the same relative deviation between PD and PD* at counterpart level as for the average PD and PD* at obligor grade level.
240	RWA**		Institutions shall calculate and report RWA** for the portfolios Corporate, Corporate SME, Retail SME and Retail secured by real estate at a total portfolio and a country level. These portfolios are defined in template 103 of Annex I and are identified with the following portfolio IDs: CORP_ALL_0086_**_****_**_Rx0 SMEC_ALL_0106_**_****_**_Rx0 SMER_ALL_0106_**_****_**_Rx0 MORT_ALL_0094_**_****_**_Rx0 RWA** is the hypothetical risk-weighted exposure amount, after applying the SME supporting factor, that results from the application of the PD** values, as defined below, instead of the institution's PD values, for each exposure. The remaining parameters (LGD, M,…) needed in the computation shall not be subject to changes. PD** is based on a calculation performed separately for each obligor grade, where the obligor grades as reported in column 005 of template 8.2 of Annex I to Implementing Regulation (EU) No 680/2014 (cf. Q&A 2016_2782) are to be used (see Annex II to Implementing Regulation (EU) No 680/2014, 8.1 column 010 and 8.2 for instructions). For each obligor grade, p** is the smallest positive value satisfying the equation $$p^{**} + \Phi^{-1}(q) \cdot \sqrt{\frac{p^{**} \cdot (1 - p^{**})}{n}} \geq DR_{5y}$$ where: Φ^{-1} = the inverse function of the standard normal (cumulative) distribution; q = the confidence level, set at 97,5 %;

Column	Label	Legal reference	Instructions
			DR_{5y} = the default rate of the 5 latest years for the obligor grade, calculated as the simple average of five 1-year case-weighted default rates; n = the number of obligors that were not in default and assigned the obligor grade under consideration exactly one year before the references date. For each obligor, PD** is defined as PD** = max(PD, p**), where PD is the PD assigned to the obligor for the purposes of the institution's RWA calculation and p** is as defined for the obligor grade assigned to the obligor. An institution using continuous PD shall determine first the PD** for the average PD of each obligor grade and subsequently apply by obligor grade the same relative deviation between PD and PD** at counterpart level as for the average PD and PD** at obligor grade level.

COMMON INSTRUCTIONS

An institution shall apply all of the following:

(a) Unless explicitly specified otherwise in the portfolio description, all positions shall be booked 12 October 2017. Once positions have been booked, each portfolio shall age for the duration of the benchmarking exercise. Furthermore, calculations shall be carried out under the assumption that the institution will not take any action to manage the portfolio in any way during the entire period of the benchmarking exercise. Unless explicitly stated otherwise in the specifications for a particular portfolio, strike prices for option positions shall be determined relative to prices for the underlying as observed at market close on12 October 2017.

(b) For the purpose of the pre-benchmarking exercise validation, the valuation of each portfolio shall be submitted to the institution's competent authority by 11 June 2018. The exact timing of the initial market valuation shall be 27 October 2017, 5.30 pm CET (4.30 pm GMT).

Initial Market Valuation ('IMV') means the market value at the booking date plus the unrealised balance (i.e. profit or loss that has been made but not yet realised or that would be realised where the position would be closed out (or 'unwound')) until the valuation date and time; i.e. MtM (12/10/2017) + {MtM (27/10/2017, 5:30 CET) − MtM (12/10/2017)}, where MtM stands for Mark to Market. Therefore, IMV is the market value of the portfolio at the valuation date and time.

(c) The risks of the positions shall be calculated without taking into account the funding costs.

(d) To the extent possible, counterparty credit risk shall be excluded when valuing the risks of the portfolios.

(e) The 10-day 99 % VaR shall be calculated on a daily basis. Stressed Value-at-Risk ('sVaR') and the Incremental Risk Charge ('IRC') may be calculated on a weekly basis. sVaR and IRC shall be based on end–of-day prices for each Friday in the time window of the benchmarking exercise.

(f) For each portfolio, results in the base currency of the portfolio, as required in the table below, shall be provided.

(g) For transactions that include long positions in Credit Default Swaps ('CDS'), it shall be assumed that an immediate up-front fee is paid to enter the position as per the market conventions. The maturity date for all CDS in the exercise shall be treated as following conventional quarterly termination dates.

(h) Additional specifications needed in order to carry out pricing calculations required for CDS positions shall be done in a way that is consistent with commonly used market standards and conventions.

(i) The maturity date that ensures that the transaction is closest to the term-to-maturity specified shall be used.

(j) For material details of the product specification that are not explicitly stated in this Annex, the assumptions that have been used, including day count convention, and the choice for a tradable and liquid instrument where permitted, shall be provided along with the results.

(k) The abbreviations ATM, OTM and ITM refer to the relative position of the current or future price of a derivative's underlying asset with respect to the strike price of that derivative ('moneyness'). ATM stands for 'at the money', OTM stands for 'out of the money', and ITM stands for 'in the money'.

(l) All options shall be treated as if they are traded over-the-counter ('OTC'), unless explicitly specified otherwise in the portfolio.

(m) The standard timing conventions for OTC options shall be followed (i.e. expiry dates are the business day following a non-trading day). The timing convention for options shall be as follows: the time to maturity for a *n*-month option shall be *n* months. Where options expire on a non-trading day, institutions shall adjust the expiration date per business day, in accordance with common market practices.

(n) All OTC options shall be treated as follows:

— as American for single name equities and commodities;

— as European for equity indices, foreign exchange and swaptions.

(o) For all options the premium from the initial market value calculations shall be excluded, so that options shall be considered as '*naked*'.

(p) Regarding the Correlation Trading Portfolio ('CTP'), 'IM' stands for Risk Measures resulting from Internal Model calculations for CTP in accordance with Article 377 of Regulation (EU) No 575/2013. It is indicated as All Price Risk ('APR') in Annex VI to this Implementing Regulation.

(q) For the positions denominated in a common base currency but composed of one or more instruments denominated in a different currency, the Initial Market Valuation ('IMV') shall be converted in the common portfolio base currency using the appropriate foreign exchange ('FX') spot rate at the end of the booking date (12 October 2017). The same common portfolio base currency that was used to convert the IMV shall be used for Profit-and-Loss ('P&L') results, risk and stressed measures (VaR, sVaR, IRC, APR) by using the corresponding and appropriate FX rate.

(r) When booking all positions, institutions shall follow appropriate market conventions where not otherwise specified. In the following sections, 'long' means 'buy' and 'short' means 'sell'. For CDS, 'long' means 'buy protection' and 'short' means 'sell protection'. This follows from standard market practice.

(s) When an instrument is subject to a corporate action including a call from the issuer, or a default or similar actions, institutions shall exclude the instrument from the portfolio together with any related CDS or option.

(t) 'On-the-run' referring to an Index Series, means the most liquid and tradable series of that specific index available in the market. Institutions shall communicate their choice of the Index Series along with the related results in the appropriate text cell in the templates.

(u) The Euro Interbank Offered Rate ('EURIBOR') is the rate calculated by the European Money Markets Institute at different maturities for Euro interbank term deposits.

(v) The London Interbank Offered Rate ('LIBOR') is the rate calculated by the Intercontinental Exchange at different maturities for interbank term deposits in different currencies.
