The term "Viscosity V" means the kinematic viscosity at 50°C expressed in centistokes by the ASTM D 445 method.

The term "Diluted colour C" means the colour of a product, as determined by the ASTM D 1500 method, after one part of such product has been mixed with 99 parts by volume of carbon tetrachloride. The colour must be determined immediately after dilution.

This subheading covers only fuel oils of natural colour.

Subheading 27.10(C)(II) does not cover heavy oils defined in paragraph F above for which it is not possible to determine: the distillation percentage at 250°C by the ASTM D 86 method (zero shall be deemed to be a percentage); the kinematic viscosity at 50°C by the ASTM D 445 method; or the diluted colour C by the ASTM D 1500 method. Such products fall within subheading 27.10(C)(III).

2. *For the purposes of heading No. 27.11, the expressions "commercial propane" and "commercial butane" (subheading 27.11(B)(I)) shall be taken to apply to products with a relative vapour pressure in the liquid state and at 37·8°C of not more than 25 kg/cm², or 24·5 bars, by the ASTM D 1267 method.*

3. *For the purposes of heading No. 27.12, the expression "crude petroleum jelly" (subheading 27.12(A)) shall be taken to apply to petroleum jelly of a natural colour higher than 4·5 by the ASTM D 1500 method.*

4. *For the purposes of subheading 27.13(B)(I), the term "crude" shall be taken to apply to products:*

(*a*) *with an oil content of 3·5 or higher by the ASTM D 721 method, if their viscosity at 100°C is lower than 9 centistokes by the ASTM D 445 method; or*

(*b*) *of a natural colour higher than 3 by the ASTM D 1500 method, if their viscosity at 100°C is 9 centistokes or higher by the ASTM D 445 method.*

(*a*) *vacuum distillation;*

(*b*) *re-distillation by a very thorough fractionation process;*

(*c*) *cracking;*

(*d*) *reforming;*

(*m*) (*in respect of products of subheading 27.10(C) only*) *treatment with hydrogen at a pressure of more than 20 atmospheres and a temperature of more than 250°C with the use of a catalyst, other than to effect desulphurisation, when the hydrogen constitutes an active element in a chemical reaction. The further treatment with hydrogen of lubricating oils of subheading 27.10(C)(III) (e.g. hydrofinishing or decolourisation) in order, more especially, to improve colour or stability shall not, however, be deemed to be a specific process;*

(*n*) (*in respect of products of subheading 27.10(C)(II) only*) *atmospheric distillation, on condition that less than 30% of these products distils, by volume, including losses, at 300°C by the ASTM D 86 method;*

(*o*) (*in respect of products of subheading 27.10(C)(III) only*) *treatment by means of a high-frequency electrical brush-discharge.*

6. *Subheading 27.10(C)(III)(c) covers only oils to be mixed by the importer with other oils, with the products of heading No. 38.14 or with thickeners in order to produce oils, greases or lubricating preparations, in enterprises which, because of the plant with which they are equipped, cannot perform the specific processes listed in Additional Note 5 or transform oil by other chemical means, and which process such oils for resale in plants equipped with all the following:*

—at least two storage tanks for the basic oils in bulk;

—at least one mixing tank with power-driven mixing equipment, with or without heating equipment, and with provision for the incorporation of additives; and

—conditioning apparatus.

Special Note applying to subheadings only

Throughout this Schedule:

(*a*) "Hydrocarbon oil" means petroleum oils, coal tar, and oils produced from coal, shale, peat or any other bituminous substance, and all liquid hydrocarbons, but does not include such hydrocarbons or bituminous or asphaltic substances as are—

(i) solid or semi-solid at a temperature of 60°F; or

(ii) gaseous at a temperature of 60°F and under a pressure of one atmosphere.

The expression also includes products which, apart from small proportions of colouring matter or of additives, consist wholly of hydrocarbon oil as defined above. For this purpose, "additive" means any substance commonly added in small proportions to hydrocarbon oil for the purpose of improving or modifying its quality or characteristics as a fuel or as a lubricant.

(*b*) "Light oil" means hydrocarbon oil of which not less than 90% by volume distils at a temperature not exceeding 210°C, or which gives off an inflammable vapour at a temperature of less than 23°C when tested in the manner prescribed by the Acts relating to petroleum.

(*c*) Except as provided in paragraph (*a*) of this Note, references to hydrocarbon oil do not include mixtures or combinations of such oil with other substances.

EXPLANATORY NOTE

(This Note is not part of the Order.)

This Order, which comes into operation generally on 1st April 1973, further amends the Import Duties (General) (No. 7) Order 1971, which sets out the United Kingdom Customs Tariff and the protective import duties chargeable in accordance with it.

The Order (Article 3 and Schedules 1 and 5) provides for changes in duty, coming into effect on 30th April 1973, on products covered by the European Economic Community's common organisation of the market in beef and veal. The changes implement the first move towards the Common Customs Tariff of the Community in accordance with Article 59(2) of the Act of Accession. Different treatment applies to goods according as they originate in third countries, non-Commonwealth countries associated with the Community, certain developing Commonwealth countries and the other Commonwealth countries.

The Order also provides for—

(*a*) a number of amendments to the tariff nomenclature in order to conform with that of the Common Customs Tariff (Schedule 2) and

(*b*) new nomenclature for Chapter 27 and part of Chapter 73 of the United Kingdom Customs Tariff, without affecting the rates of duty chargeable on the goods concerned, (Schedules 3 and 4).

A consequential amendment is made to the Import Duties (Developing Countries) Order 1971.
