EXPLANATORY NOTE

(This Note is not part of the Order.)

This Order adjusts the provisions for determining the norm (the national average rateable value per thousand gallons of water per day) which is to be used in calculating the cumulo rateable values of water undertakings for 1971-72 and subsequent years. The adjustment has regard to the general change in rateable values arising from the revaluation in 1971 and its effect is to increase the norm from £5·568 to £9·744.
